EXPERIENCE

Full Stack Developer
Virket

02/2014 – Present   *Mexico City*

Achievements/Tasks

□ Designed and wrote our Ionic (v2 - 5) mobile applications used by 50k+ monthly users worldwide, using Angular (v2 - 9) to build core features and reusable components and Apache Cordova for native component integration.

□ Implemented reactive programming by using RxJS to handle async data-streams from the server and between components, and Redux+NgRx to manage the application store, improving the data flow and how is displayed to the user.

□ Reduced developing times by creating reusable styles and themes with SASS. Constantly teaming up with UX and providing ideas to integrate appealing user interfaces with desired functionality.

□ Contributed to the design, development and maintenance of our Middleware written in PHP (CodeIgniter) that provides services to our mobile and web apps. I have integrated features such as payment gateways, user authentication (JWT), push notifications (Firebase) and mail automation (Mailgun). Created and optimized MySQL queries and improved loading times with constant code refactoring.

□ Built API abstraction layers for more than 10 customers, analyzing needs and requirements and consuming several REST and SOAP services for seamless integration into our applications.

□ Developed interactive dashboards for advertising reporting, processing data with PHP and writing the front end using Bootstrap, jQuery and implementing graphic libraries like Highcharts or Mapbox.
